

SOC 2 Type II Report -- Cloudy SaaS Inc

Cloudy SaaS Inc -- Security, Availability, and Confidentiality Trust Services Report.
Reporting period: the twelve months ended the most recent fiscal quarter.

CC6.1 -- Logical and Physical Access Controls: We enforce multi-factor authentication for all employee access to production systems, without exception. MFA is required at both the VPN and SSO layer before any engineer can reach a production credential.

CC6.8 -- Log Retention: Production audit logs are retained for 30 days in hot storage before rolling off to cold archive.

CC7.2 -- Security Monitoring: Continuous monitoring is in place across production infrastructure via a centralized SIEM, with on-call paging for anomalies. Monitoring coverage has recently trended down and is under active remediation.

This report is provided to Cloudy SaaS Inc customers under NDA for vendor risk assessment purposes.
